

**Service Bulletin, April 30, 2021**

Dear Niner Bikes Retailer:

To prevent loosening while riding, Niner strongly recommends applying blue Loctite to the hardware screws pictured below. This includes the flip chip retaining screw at both seat stay pivots as well as the two screws used to attach the bash guard to the lower link. The models included in this recommendation are RIP 9 RDO V3, WFO 9 RDO and JET 9 RDO V3. We have included this step in our factory assembly process going forward. Please be sure to check that these screws have blue Loctite applied until we can incorporate this step into regular production.

Thank you,

Niner Bikes
